MYTH BUSTED

"Incognito mode makes you anonymous."

Nope.

Here's what it actually does.

here's the truth -> 

 stay(human).sec

1/4

WHY IT MATTERS

People use it thinking they're invisible.

That false confidence is the actual risk — on a work network, a school network, or any shared Wi-Fi, incognito mode was never built to hide you from the people who can see the most.

here's what's true ->

THE TRUTH

What incognito actually turns off:

Local history, cookies, and autofill — that's it. Nothing about your network, ISP, or the sites you visit changes.

SEES YOU

Your ISP and Wi-Fi network can still see every site you visit.

SEES YOU

The websites themselves can still see your IP address.

DOESN'T SEE

Only your own browser's local history stays hidden.

one more thing ->

```

FILE_004.md

Real privacy needs a real tool.

That's what a **VPN is for.**

Like. Comment. Follow.
(yes, all three – we're needy)

Next: the AI call that
sounds exactly like your kid. **(It's not.)**
