

```
stay(human).sec:~$ cat case_047.md
```

## CASE FILE

**A real phishing email.**

**Broken down, line by line.**

Every part of it is doing  
a specific job.

let's open it -> 

```
stay(human).sec
```

1/4

### WHY IT MATTERS

**The sender name is not the sender.**

Anyone can type "Bank Support" as their display name — that's just a label. It's the actual email address underneath that tells you where a message really came from, and most inboxes hide it by default.

here's the anatomy ->

## THE ANATOMY

# The red flags, one by one:

### GREETING

"Dear Customer" instead of your real name.

### URGENCY

"Suspended in 24 hours" — manufactured pressure.

### THE LINK

Text says one thing, hover shows another address.

**\$ rule: hover before you click**

**one more thing ->** 

```
stay(human).sec:~$ cat case_047.md
```

FILE\_007.md

**Don't click.  
Go direct instead.**

Type the site in **yourself**.

**Like. Comment. Follow.**  
(yes, all three – we're needy)
