HABIT CHECK

The password mistake

nobody thinks is a big deal.

You're probably doing it.

Here's the spoiler:
it's reusing the same password.

here's why it matters -> 

 stay(human).sec

1/4

```
stay(human).sec:~$ cat habit.md
```

— □ ✕

WHY IT MATTERS

One leak, everywhere you reused it.

One password, leaked from any random site you signed up for years ago, can unlock every other account where you reused it. It's called credential stuffing, and a machine does it in seconds — not a person.

here's the fix -> 

() stay(human).sec

2/4

THE FIX

Unique per site beats memorable.

CHECK

Run your phone's built-in password checkup first.

USE

iCloud Keychain or Google Password Manager — already free, already there.

PRIORITIZE

Fix email, banking, and payment accounts first.

one more thing -> 

```
stay(human).sec:~$ cat habit.md
```

FILE_002.md

One habit. Every account, protected.
