CYBER BASICS

**"Your package couldn't
be delivered."**

Click here to fix it.

That text is called smishing.
Here's how it actually works.

here's the pattern ->

 stay(human).sec

WHY IT MATTERS

A text feels more urgent than an email.

Smishing works because almost nobody's ever been taught to question a text message the way they question email. The wording changes every time — the pattern underneath almost never does.

here's the pattern ->

THE PATTERN

Three ingredients, every time:

A NAME YOU TRUST

Your bank, a delivery company, the tax office.

MANUFACTURED URGENCY

A problem that supposedly needs fixing right now.

A LINK

That promises to fix it — don't tap it.

\$ rule: never tap the link

one more thing -> 

```
stay(human).sec:~$ cat basics.md
```

FILE_003.md

**Never tap the link.
Go direct instead.**

Open the app **yourself**.

Like. Comment. Follow.
(yes, all three – we're needy)

Next: incognito mode
doesn't make you anonymous.
