```

AI WATCH

The old deepfake tells

don't work anymore.

Here's what still does.

How to spot one in 2026.

here's why -> 

```
stay(human).sec
```

1/4

WHY IT MATTERS

Bad blinking used to give it away.

Not anymore. Newer models fixed the classic tells — natural blinking, lip-sync, lighting. Judging a video by "does it look real" alone is a much weaker test than it used to be.

```
$ visual_tells: unreliable now
```

here's what still works -> 

```
stay(human).sec
```

```
stay(human).sec:~$ cat verify.md
```

— □ ✕

THE TELLS

What still holds up:

PHYSICS

Lighting and reflections that don't quite match.

THE ASK

A request for money or credentials — the real goal.

ONE CHANNEL

No way offered to verify a second way.

\$ fix: verify a second way

the fix -> 

```
stay(human).sec
```

3/4

```
stay(human).sec:~$ cat verify.md
```

FILE_008.md

**When in doubt,
verify a second way.**

A fake can't answer **what it's never heard.**

Like. Comment. Follow.
(yes, all three – we're needy)

More files drop
every day. **Follow along.**
